                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being put and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB seq

### ALIGNMENTS

AAY01521 standard; Protein; 478 ₽

# AAY01521;

14-JUN-1999 (first entry)

# Chicken c-erg protein.

Chicken; C-11 protein; cell calcification inhibiting activity; cell calcification inhibiting agent; c-erg protein; arthritis deformans; ossification; spinal column ligament.

### Gallus gp.

JP11075871-A.

# 23-MAR-1999.

20-JUN-1997; 18-JUN-1997; 29-MAY-1998; 97US-0050297 97US-0878177 98JP-0166076

# (CHUS ) CHUGAI PHARM CO LTD (UYPE-) UNIV PENNSYLVANIA.

# WPI; 1999-257708/22. N-PSDB; AAX26552.

An active protein for inhibiting cell calcification - useful for measuring the calcification of a cell, for diagnosing arthritis

The specification also describes a chicken C-II protein (AAYOIS20) which has cell calcification inhibiting activity and a cell calcification inhibiting activity and a cell calcification inhibiting agent containing c-erg protein. The proteins are used for measuring the calcification of a cell, for diagnosing arthritis deformans or ossification of spinal column ligament.

The specification also describes a cell calcification inhibiting agent containing c-erg protein (AAV01521). The proteins are used for measuring the calcification of a cell, for diagnosing arthritis deformans or oscification of a

The invention relates to an Erg (a member of the Ets family of C transcription factors) modulator for use in medicine, where the modulator is not tumour necrosis factor-alpha (TNF-alpha) or interleukin-1 (IL-1). CC Also included are a method of screening for a drug or drug candidate, the offect of Erg on secreted protein, acidic, cysteine-rich convolving determining whether or not a group being screened modulates the effect of Erg on secreted protein, acidic, cysteine-rich (Osteonectin/BM-40) (SPARC), thrombospondin (TSP), rho-A (a Ras cysteined factor (VWF) RNA or polypeptide expression, or cysteined factor (VWF) RNA or polypeptide expression, or cysteined factor (VWF) RNA or a heterologous polypeptide that is under the control of one or more regulatory sequences of the SPARC, cysteined modulates the expression of Erg RNA in a given expression system, determining whether or not a group being screened modulates the expression of Erg RNA in a given cyste, determining whether or not a group being screened cystem, determining whether or not a proper sing an Erg binding of Erg to a nucleic acid comprising an Erg binding cyste, determining whether or not a nucleic acid hybridises with DNA of an cyste, determining whether or not a disorder such as a disorder in cystes acid knocks out or reduces expression of Erg. Erg based cystes acid comprising an Erg binding cystes acid comprising whether or not a cystes acid comprising whether or not a cystes acid cystes acid acid cystes ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New modulator of a member of the Ets family of transcription factors, Erg, which is not tumour necrosis factor-alpha or interleukin-1, for treating cancer, rheumatoid arthritis, atherosclerosis, restenosis, a osteoporosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The probe 11RR1 was used to screen a human marrow cDNA library (Clontech cat.# HL1058). The clone BM025 was identified and sequenced. It represents the entire coding region together with 5'- and 3'-UTRS of the Hum-Fli-1 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical acoust of the collection of the content of the collection of the collect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exor nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  analyzing

                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA4135). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed appectification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Single

They can be used to measure genome the presiston in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the present sequence is a protein encoded by one of the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;
                                                                                                                                                                                                                                                                                                                                                          Sequence
